

Homework 7: Due Session 8

1. Flash (and related) Assignments:

- Build the Index page and one subpage in Flash. Create working navigation for these two pages.
 - a. Plan your button styles for your links and sub-nav. Then create a couple of buttons—they can be simple now and more complex later. Review my buttons FLA for some ideas.
 - b. Link your buttons using actionScript:
 - i. First write a regular button **event listener**
 - ii. Then in the event handler (the function definition) use the following script (for example)
`navigateToURL(new URLRequest("../index.html"), "_self")`
 - iii. Create at least two working buttons on BOTH pages
 - c. Publish, manage files and upload to server. Test links and update in Flash as needed.

***the following are very important steps for getting the galleries started!**

- **Photograph work** and/or gather images (at least 15) for the start of your Gallery production.

2. Project Notebook:

- Make a final wireframe of your Gallery layout. **Add functional notes to specify target sizes** for the images (for thumbs, medium (if using), and large?) and any other technical needs—dynamic or interactive elements.
- **Research:** view slideshows online for ideas.
- List and name the galleries you plan to have and what they will contain.
